# SPECIAL REDUCED RATES FOR SGES MEMBERS

## Neural Computing & Applications

**John MacIntrye, Editor-in-Chief** http://www.nca.sunderland.ac.uk

**Neural Computing & Applications** is a quarterly international journal which publishes original research and other information in the field of practical applications of neural computing.

All items relevant to building practical systems are within its scope, including contributions in the area of applicable neural networks theory,supervised and unsupervised learning methods, algorithms, architectures, performance measures, applied statistics, software simulations, hardware implementations, benchmarks, system engineering and integration and case histories of innovative applications.

The original articles are high-quality contributions, representing new and significant research, developments or applications of practical use and value. They are reviewed by at least two referees. The forum presentations are summaries of oral presentations made at quarterly meetings of the Neural Computing Applications Forum and are generally reviewed by one referee.

## Pattern Analysis and Applications

**Sameer Singh, Editor-in-Chief** http://www.dcs.exeter.ac.uk/paa

**Pattern Analysis and Applications** is a new quarterly journal,publishing articles concerning intelligent pattern analysis and applications in computer science and engineering.

This contemporary, state-of-the-art journal, provides a much-needed forum for original research. Under the guidance of the Editor-in-Chief, Sameer Singh,it offers a comprehensive study of the most current issues in the field.

**Pattern Analysis and Applications** looks at new technology and methods for pattern recognition and analysis in applied domains including,but not limited to:

■ computer vision and image processing ■ speech analysis ■ robotics ■ multimedia ■ document analysis ■ character recognition
■ knowledge engineering for pattern recognition ■ fuzzy pattern recognition ■ intelligent control.

**Pattern Analysis and Applications** has a broad appeal including researchers in computer science and engineering,novel pattern recognition and analysis techniques, and Research and Development personnel in industry.
